

Acknowledgements

The San Bernardino County Homeless Partnership wishes to thank all the individuals and organizations that contributed to the preparation, implementation, and success of the 2022 Point-In-Time Count and Subpopulation Survey. Such an endeavor would not be possible without the collaboration and efforts of volunteers, community groups, faith- and community-based organizations, county departments, city representatives and staff, homeless service providers, law enforcement and elected officials. Your hard work, time, and dedication to ending homelessness are greatly appreciated.

- Special thanks to the 400 community volunteers from across San Bernardino County who canvassed areas identified as "green count zones" the morning of February 24, to complete the 2022 Point-In-Time-Count and Subpopulation Survey.
- Special thanks to the following agencies and community organizations that contributed staff time, support and resources, and office space for planning, training, and development activities to help make the 2022 Point-In-Time Count and Subpopulation Survey a success:

Background Information

The U.S. Department of Housing and Urban Development (HUD), as part of its requirements for local Continuums of Care (CoCs) to continue to receive continuum of care funding for homeless persons, requires CoCs to conduct "one-day point-in-time" sheltered and unsheltered homeless counts during the last 10 days of January. The CA-609 San Bernardino City and County CoC is one of approximately 400 jurisdictions nationwide that submit an annual application to HUD for continuum of care funding.

HUD requires CoCs to conduct a sheltered count every year and an unsheltered count every other year. The San Bernardino City and County CoC conducts an annual unsheltered count as do more than half of California's 44 CoCs.

In 2022, HUD permitted CoCs to request an exception to conduct a homeless count during the last 10 days of February because of pandemic related reasons. The CA-609 San Bernardino City and County CoC requested and received an exception and conducted the homeless count on February 24, 2022.

When was the Count conducted?

The unsheltered homeless count was conducted on Thursday, February 24, 2022, and began at 6 a.m. The sheltered count included residents of shelters and transitional housing programs throughout the county who slept in these facilities during the night of February 23 through the early morning of February 24.

HUD allows counting in hard-to-reach and remote places to continue up to seven days after the count as long as persons are asked if they were homeless on the day of the count and a unique identifier is used to prevent duplication. A limited amount of counting occurred during the seven days following the count in a few hard-to-reach and remote places and places were counting did not take place on February 24 because of pandemic related reasons.

Who was counted?

Per HUD's instructions, a person was considered homeless, and thus counted, only when they fell within the HUD-based definition by residing in one of the places described below:

- In places not meant for human habitation, such as cars, parks, sidewalks, and abandoned buildings;
- In an emergency shelter; and
- In transitional housing for homeless persons.

Each person who was counted was also asked a series of survey questions that ensured that all HUD required subpopulation data was collected that included persons with

- HIV/AIDS;
- · Serious mental illness; and
- Substance use disorders.

Subpopulations also included

- Families
- Veterans; and
- Youth age 18 24.

Several questions to gather local desired information were also asked and included

- In what city did you first become homeless?
- In what city are you living now?
- Did you become homeless for the first time during the past 12 months?
- Have you been released from prison or jail during the last 12 months?
- How much is your monthly income?

Who was not counted?

Per HUD's instructions, a person was not considered homeless if the person resided in one of the following places noted below:

- Medical facilities, such as hospitals, psychiatric facilities, and nursing homes;
- Jails, prisons, or juvenile detention facilities;
- Chemical dependency facilities, such as substance abuse treatment facilities and detox centers;
- Foster care homes or foster care group homes.

Also, per HUD's instructions, children identified by McKinney-Vento Homeless Coordinators at schools as homeless should not be counted. Children may be included in the count if they live in an emergency shelter or transitional housing program, or if they are unsheltered.

Lastly, HUD does not consider persons who are "doubled up," or persons who are "near homelessness" to be homeless but considers them to be at risk of becoming homeless. Thus, such persons were not included in the homeless count.

The County of San Bernardino, like many other counties, has a substantial number of households that are at risk of becoming homeless. The Census Bureau noted that 14 percent or approximately 100,000 households (consisting of approximately 300,000 residents) in San

Bernardino County were living at or below the poverty level as reported in the 2020 American Community Survey.

Many of these persons can become homeless because of social structural issues such as increases in rent, loss of jobs, and rising health care costs. In addition, personal experiences such as domestic violence, physical disabilities, mental illness, and substance abuse can cause members of a low-income household or an entire household to become homeless. Often, one or more of these experiences factor into a household's homelessness experience.

Who carried out the Count?

The homeless count and subpopulation survey was a joint effort of the San Bernardino County Homeless Partnership, the San Bernardino County Office of Homeless Services, and the Institute for Urban Initiatives. Approximately 800 community volunteers were recruited to implement the count and subpopulation survey. As noted in the Acknowledgements section of this report, there were nearly 30 agencies that contributed staff time and office space for training and deployment of counters and there were 24 law enforcement agencies that provided their time, knowledge, and expertise concerning locations of homeless persons. Also, there were nearly 30 additional agencies that helped with the planning process, including the San Bernardino County Innovation and Technology Department, which created maps to guide counters.

The San Bernardino County Homeless Partnership (SBCHP) was formed to provide a more focused approach to issues of homelessness within San Bernardino County. Its primary purpose is to develop a countywide public and private partnership and to coordinate services and resources to end homelessness in San Bernardino County. The partnership consists of community and faith-based organizations, educational institutions, non-profit organizations, private industry, and federal, state, and local governments. SBCHP was developed to promote a strong collaboration between agencies to direct the planning, development, and implementation of the County's 10-year Strategy to end chronic homelessness. The partnership provides leadership in creating a comprehensive countywide network of service delivery to homeless and near-homeless families and individuals through facilitating better communication, planning, coordination, and cooperation among all entities that provide services and/or resources to relieve homelessness.

The San Bernardino County Office of Homeless Services (OHS) serves as a "clearinghouse" of homeless issues for all County departments. Any homeless issues encountered by County staff can be referred to this office for resolution. OHS staff plays a vital role in the San Bernardino County Homeless Partnership as the administrative support unit to the organization. OHS ensures that the vision, mission and goals of the SBCHP are carried into effect.

The Institute for Urban Initiatives consists of several community-based and faith-based institutes that respond to the economic, housing, and social needs of neighborhoods, cities, and counties from local community, regional, national, international, and faith-based perspectives. Urban Initiatives has completed over 50 assessments for local government and private organizations throughout Southern California that have focused on affordable housing, business development and education for micro-businesses, fair housing, homelessness, migrant farming, and street vending. For more information visit www.urban-initiatives.org.

Methodology

Unsheltered Count and Survey

To conduct the Count, Esri's ArcGIS software platform was used. The 2022 Homeless Point-in-Time Count was a configuration of Survey 123 for ArcGIS and Operations Dashboard for ArcGIS that was used by the County's Office of Homeless Services in partnership with the Innovation and Technology Department to conduct the 2022 homeless count and survey.

The Homeless Point-in-Time Count efforts included the following applications:

- Homeless count survey, which included nearly 30 questions to meet HUD requirements concerning the collection of data for designated subpopulations and to meet local requests for additional information about the homeless population;
- Homeless count dashboard, which was used to monitor results of the point-in-time count in real time; and
- Homeless count results application that provided for instant viewing of data and tables that detailed point-in-time results.

A digital survey form was designed to simplify the surveyor's experience; only relevant questions were displayed based on the answers already entered, eliminating the need for surveyors to devote time and effort to determine which questions to ask, and resulting in a simpler linear surveying experience.

Additional logic was built into the form to perform calculations behind-the-scenes. For example, the form combined the answers from a subset of questions to determine whether the respondent met HUD's definition of chronically homeless and calculated the result instantly as the survey was completed. Extensive testing was conducted to ensure the various combinations of factors all successfully calculated to a correct result. These calculations allowed for real-time monitoring of such metrics as the count was taking place using an Operations Dashboard, and ultimately eliminated the need for them to be calculated after the count was completed.

An added benefit of using digital surveys was the capture of location information. When a survey was conducted, the global positing system (GPS) location of the surveyor's mobile device was captured, providing the geographic location of where the survey took place, and opening up opportunities for mapping and analyses not possible in previous years. (For safety and privacy reasons, location information was not captured for surveys of sheltered homeless persons.) Upon completion of the count, the data were examined and scrubbed to remove any invalid records, such as practice surveys submitted before the official start of the count. Steps were also taken to ensure that duplicate records – instances where the same individual was surveyed more than once in the same location – were identified and removed.

Closer monitoring of undercounted areas

As previously noted, the ESRI Survey 123 app provided the ability for a homeless count dashboard, which was used to monitor results of the Point-in-Time Count in real-time. This provided instant viewing of data points on the dashboard in the command center during the time of the count. Each data point represented a household counted.

If data points did not appear in areas where homeless persons were known to live during the day of the count, volunteers were sent to the area to count, and persons counted were included in the total count if they were not previously counted.

If data points did not appear in areas where homeless persons were known to live, professional outreach workers were sent to those areas the next day and persons were included in the total count if they were not counted the day before. HUD allows for next day counting based upon two conditions: 1) any homeless persons encountered be asked if they were homeless on the day of the count and 2) a unique identifier has to be created for that person.

A unique identifier was created for all persons counted on the day of the count and the day after the count. If the same unique identifier appeared twice, it was assumed that it was the same person; also, a person was only included once in the total count if the person stated "yes" when asked "if they were homeless on the day of the count," which was Thursday, February 24th.

Analyzing the subpopulation data

Only adults and unaccompanied teenage children who are counted are surveyed, accompanied children in families were not. Of the 2,373 adults counted, 1,377 or 58% were surveyed and 966 or 42% were observed. Counters were instructed that if they believed there was a safety issue, or if a person was sleeping, or if a person refused to be interviewed, they were to record "no" in the digital survey form for question 4, which was "Are you able to interview this person" and then to give the best guess-estimate for questions 5-8, which asked for gender, age, ethnicity, and race.

Sheltered

HUD encourages the use of Homeless Management Information Services (HMIS) data to generate sheltered counts and subpopulation data for programs with 100% of beds participating in HMIS. Therefore, HMIS was used to gather the total number of occupied beds and the number of persons for each subpopulation.

A data collection instrument was used to collect the total number of occupied beds and the number of persons for each subpopulation for non-participating HMIS programs and for HMIS participating agencies whose HMIS data is incomplete and/or incorrect. The same questions used to collect subpopulation data through HMIS were used for the data collection instrument. Thus, sheltered count data for all sheltered programs was gathered either through a data collection sheet or HMIS.

Key Findings

- 1. The number of adults and children counted as homeless increase by approximately 7% when the 2022 point-in-time homeless count of 3,333 is compared to the 2020 point-in-time homeless count of 3,125.
- 2. The number of adults and children counted as unsheltered in 2022 was nearly identical-2,389 in 2022 and 2,390 in 2020.
- 3. The number of adults and children counted as sheltered increased by 28% when the 2022 sheltered count of 944 is compared to the 2020 sheltered count of 735.
- 4. More than three-fourths (79.2%) or 2,640 of the 3,333 homeless adults and children were counted within seven cities that include Barstow, Colton, Fontana, Ontario, Redlands, San Bernardino, and Victorville. These seven cities accounted for 1,822 or more than three-fourths (76.2%) of the total unsheltered population of 2,389 and 818 or 86.6% of the 944 persons counted in shelters and transitional housing.

Nearly three-fourths (72.6%) or 2,270 of the 3,125 homeless adults and children counted in 2020 were counted within eight cities that include Barstow, Colton, Fontana, Ontario, Redlands, Rialto, San Bernardino, and Victorville. These eight cities accounted for three-fourths (74.5%) of the total unsheltered population as well as nearly three-fourths (70.2%) of persons counted in shelters and transitional housing including a safe haven program.

- 5. Nearly half (47%) of unsheltered adults who agreed to be surveyed stated that the city in which they first became homeless was San Bernardino (47%) and Victorville (6%).
- 6. More than one-fourth (27%) of adults and children counted as homeless in 2022 became homeless for the first time during the 12 months prior to the homeless count
- 7. Nearly one-fourth (22%) of adults stated "yes" when asked if they were released from prison or jail during the past 12 months, which was the case during the 2020 unsheltered homeless count (23%) and the 2019 homeless count (22%).
- 8. Nearly half (43.5%) of unsheltered adults were chronically homeless, which is defined as being homeless for one year or more and having a disabling condition such as mental illness, chronic health condition, and a physical disability.

Executive Summary

There were 3,333 persons who were counted as homeless. The previous point-in-time homeless count and subpopulation survey was completed in 2020 when 3,125 persons were counted. A comparison of the last two counts reveals that

- 208 more persons were counted in 2022, which represents an increase of 6.6%;
- <u>1</u> less person was counted as unsheltered in 2022 when compared to the unsheltered count in 2020; and
- <u>209</u> more persons were counted as sheltered in 2022 when compared to the sheltered count in 2020, which represents an increase of 28.4%.

Table 1. Comparison of 2020 and 2022 Homeless Counts

| | Sheltered | Unsheltered | Total |
|---------------------|--------------|-------------|-------------|
| | | | |
| 2020 Homeless Count | 735 | 2,390 | 3,125 |
| 2022 Homeless Count | 944 | 2,389 | 3,333 |
| | | | |
| Difference: | +209 (28.4%) | -1 (0.0%) | +208 (6.6%) |

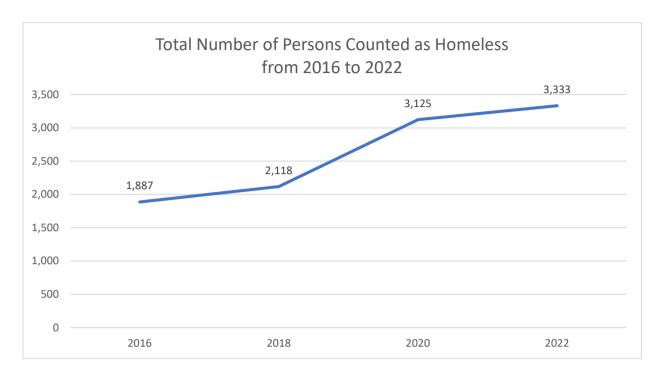

Regarding sheltered homelessness, HUD states that

• CoCs must count all individuals or families who meet the criteria in paragraph (1)(ii) of the homeless definition in 24 CFR 578.3. This includes individuals and families "living in a supervised publicly or privately operated shelter designated to provide temporary living arrangements (including congregate shelters, transitional housing, and hotels and motels paid for by charitable organizations or by federal, state, or local government programs for low-income individuals)" on the night designated for the count. This includes individuals residing in Safe Haven projects.

Regarding unsheltered homelessness, HUD states that

• CoCs must count all individuals or families who meet the criteria in paragraph (1)(i) of the homeless definition in 24 CFR 578.3. This includes individuals and families "with a primary nighttime residence that is a public or private place not designed for or ordinarily used as a regular sleeping accommodation for human beings, including a car, park, abandoned building, bus or train station, airport, or camping ground" on the night designated for the count. Rapid Re-Housing (RRH) assisted households who are still unsheltered on the night of the count (e.g., staying in an encampment and being assisted by an RRH project to obtain housing) must be included as part of the unsheltered count.

The following chart shows that the number of persons counted as unsheltered and sheltered in 2016 was 1,887 and 3,333 in 2022, which represents an increase of 1,446 persons or 77%.

The following table provides a breakdown of the total number of sheltered and unsheltered persons counted in 2022 by jurisdiction.

Table 2. Total Number of Sheltered and Unsheltered Adults and Children by Jurisdiction

 $[\]hbox{$**$ includes Domestic Violence survivor programs.}$

Unsheltered Homelessness

Of the 3,333 persons counted in 2022, 2,389 or nearly three-fourths (71.7%) were unsheltered, which is defined by HUD as

"An individual or family who lacks a fixed, regular, and adequate nighttime residence, meaning: (i) An individual or family with a primary nighttime residence that is a public or private place not designed for or ordinarily used as a regular sleeping accommodation for human beings."

HUD also requires that the total number of unsheltered and sheltered adults be broken down by various subpopulations including age, gender, race, and ethnicity. Of the 2,389 unsheltered persons counted, 2,373 were adults and 16 were children under age 18 in families.

Gender

The following table provides a breakdown by gender for adults and children under age 18 in families. There were no unaccompanied youth under age 18. HUD requires the summary to consist of men, women, transgender, gender non-conforming (i.e., not exclusively male or female), and questioning.

More than three-fourths (78.7%) of adults were male and more than half (56.3%) of children were female.

Table 5. Breakdown by Gender (n=2.389)

| | Adults | | Child: Fam | _ | Youth | npanied Under e 18 |
|-----------------------|--------|------|---------------|------|-------|--------------------------|
| | # | % | # | % | # | % |
| Male | 1,868 | 78.7 | 7 | 43.7 | 0 | 0.0 |
| Female | 482 | 20.3 | 9 | 56.3 | 0 | 0.0 |
| Transgender | 4 | 0.2 | 0 | 0.0 | 0 | 0.0 |
| Gender Non-Conforming | 17 | 0.7 | 0 | 0.0 | 0 | 0.0 |
| Questioning | 2 | 0.1 | 0 | 0.0 | 0 | 0.0 |
| | | | | | | |
| Total: | 2,373 | 100 | 16 | 100 | 0 | 0.0 |

Ethnicity

Table 5 offers a breakdown by ethnicity. HUD requires the summary to consist of Hispanics or Latinos and non-Hispanics or Latinos.

More than one-third (35.7%) of adults and nearly one-third (31.2%) of children were Hispanic or Latino.

Table 6. Breakdown by Ethnicity (n=2,389)

| | Adults | | Families | | Unaccompanied Youth Under Age 18 | |
|------------------------|--------|------|----------|------|----------------------------------|-----|
| | # | % | # | % | # | % |
| | | | | | | |
| Hispanic or Latino | 848 | 35.7 | 5 | 31.2 | 0 | 0 |
| Non-Hispanic or Latino | 1,525 | 64.3 | 11 | 68.8 | 0 | 0 |
| | | | | | | |
| Total: | 2,373 | 100 | 16 | 100 | 0 | 0.0 |

Race

Table 7 provides a breakdown by race. It is important to note that instructions from HUD were to include Hispanics or Latinos in the race categories listed below because the designation "Hispanic or Latino" does not denote race.

Table 7. Breakdown by Race (n=2,389)

| | Adults | | | ren in iilies | Unaccompanied Youth Under Age 18 | |

| Experiencing Homelessness Due to Fleeing Domestic | 166 | 7.0 |
| Violence, Dating Violence, Sexual Assault, or Stalking | | |

^{*}Families:

- Of the 10 families, 2 were chronically homeless that included 3 adults and 2 children.
- The total number of adults in the 10 families was 13 and represents 0.5% of the total adult population of 2,373.

• 47.4% or 79 of the 166 veterans were chronically homeless.

Other Survey Questions

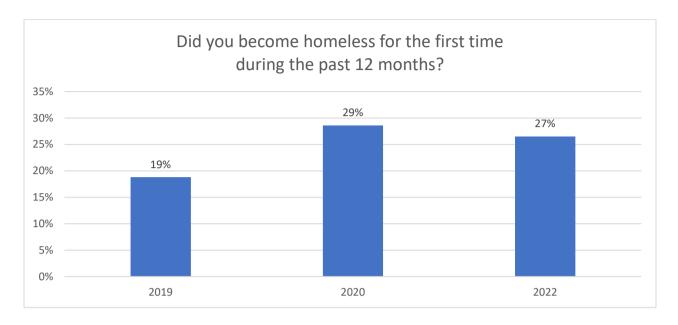

First Time Homeless

Did you become homeless for the first time during the past 12 months?

^{**10} families consisted of 13 adults and 16 children.

^{***}Veterans

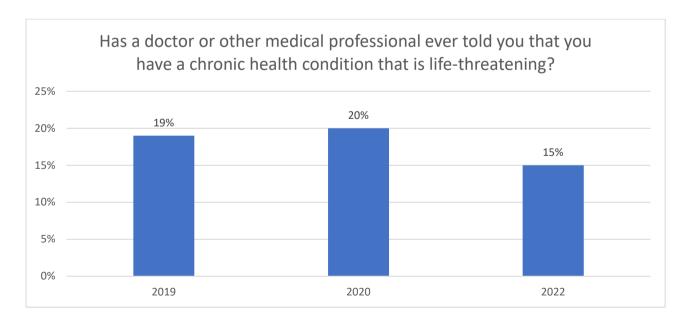

The following chart shows that more than one-fourth (27%) of adults became homeless for the first time during the 12 months preceding the 2022 count, which was also the case in 2020.

Chronic Health Condition

Has a doctor or other medical professional ever told you that you have a chronic health condition that is life-threatening such as heart, lung, liver, kidney or cancerous disease?

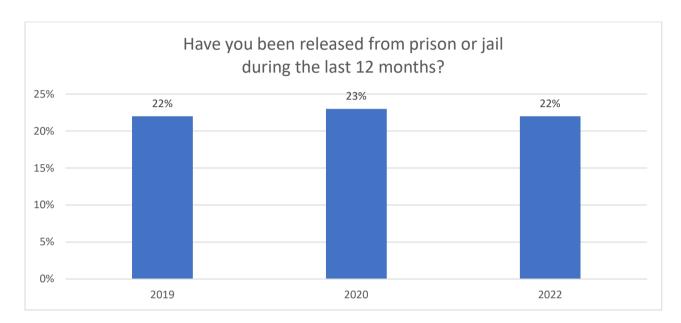

The next chart shows that 15% of adults stated "yes" when asked if a doctor or other medical professional ever told them that they had a chronic health condition that is life-threatening, which is a lesser percentage compared to the previous two unsheltered counts.

Released from Prison or Jail

Were you released from prison or jail during the past 12 months?

Nearly one-fourth (22%) of adults stated "yes" when asked if they were released from prison or jail during the 12 months preceding the 2022 count, which has been the case during the past two unsheltered homeless counts.

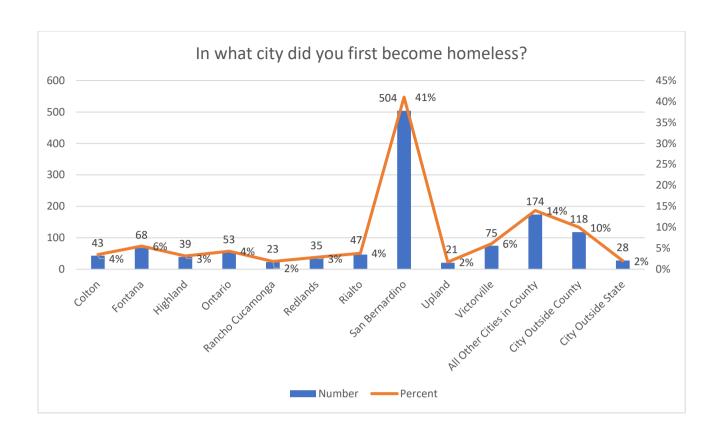

City First Homeless

Of the 1,373 adults who agreed to be interviewed, 1,228 answered the question, "In what city did you first become homeless?"

Of the 1,228 adults who answered the question, as noted in the next chart

- Nearly half (47%) stated San Bernardino or Victorville—504 (41%) stated San Bernardino and 75 (6%) stated Victorville.
- 329 or 27% stated the other eight cities listed in the chart below;
- 174 or 14% stated another city in San Bernardino County;
- 118 or 10% stated a city outside San Bernardino County; and
- 28 or 2% stated a city outside of California.

Sheltered Homelessness

Of the 3,333 persons counted in 2022, 944 persons or 28.32% were sheltered. Among the 944 sheltered persons, 611 were counted in shelters or received non-congregated shelter through a motel voucher and 333 were counted in transitional housing programs. HUD states that persons living in shelters or transitional housing programs (including safe haven programs) on the night of the count must be included in the homeless count and subpopulation survey.

As required by HUD, the sheltered count included the number of persons and households sleeping in emergency shelters (including seasonal shelters) and transitional housing programs that were listed on the Housing Inventory Chart (HIC). In addition, any persons staying in hotels or motels as a result of receiving a voucher from a social service agency were included in the sheltered count per HUD's instructions if the voucher program was listed on the HIC.

HUD also requires that the total number of sheltered persons be broken down by pre-designated subpopulations. The total number of sheltered persons by the pre-designated subpopulations for 2022 are listed in the table below.

The Homeless Inventory Count (HIC) was submitted by OHS staff to HUD on April 28, 2022. Prior to the homeless count, the HIC was specifically undated to include any new programs or exclude any programs no longer operational by OHS staff and Key Person Task Force members. A few changes were made to the HIC prior to the count.

HUD encourages the use of HMIS data to generate sheltered counts and subpopulation data for programs with 100% of beds participating in HMIS. Therefore, HMIS was used to gather the total number of occupied beds and the number of persons for each subpopulation. A data collection instrument was used to collect the total number of occupied beds and the number of persons for each subpopulation for non-participating HMIS programs and for HMIS participating agencies that do not have their HMIS data complete and correct. The same questions used to collect subpopulation data through HMIS were used for the data collection instrument. Thus, sheltered count data for all sheltered programs was gathered either through a data collection sheet or HMIS.

The following table provides a breakdown of the sheltered population (944 adults and children) by the subpopulations required by HUD.

Table 10. Sheltered Population by Subpopulations

| Subpopulation | Number | Percent |
|---|--------|---------|
| | | |
| American Indian or Alaska Native | 24 | 2.54 |
